Leading Dortmund, Germany based rental company NicLen GmbH makes another major investment in Robe fixtures – reinforcing its position as one of the largest Robe dry-hire suppliers of Robe moving lights worldwide.

At the beginning of 2012, they already had substantial numbers of Robe's latest ROBIN MMX Spot, LEDWash 600 and LEDWash 1200 units – all supplied via Robe's German distributor, LMP.

Having a large stock of Robe has proved such a success for NicLen - and the demand has been so great - that they have now purchased more fixtures – including the very newest ROBIN Series products, the MMX WashBeam, LEDBeam 100, DLS Profile and the award winning DLF Wash.

At the same time, more LEDWash 1200s and Robin MMX Spots have been added to their inventory. This reflects the fact that the MMX Spot is not just the best quality product available in the 'new 1200' class of fixtures, it's one of the most commonly requested and specified moving lights in Germany!

With the latest investment, NicLen can offer the most innovative moving light solutions 'of the moment' to all its clients, both with Robe's LED range and their next generation discharge lightsources simultaneously.

These are all based on Robe's forward thinking philosophy of producing 'smaller, lighter, brighter' lights for the future.
